Cancel

### 3. Add Device:

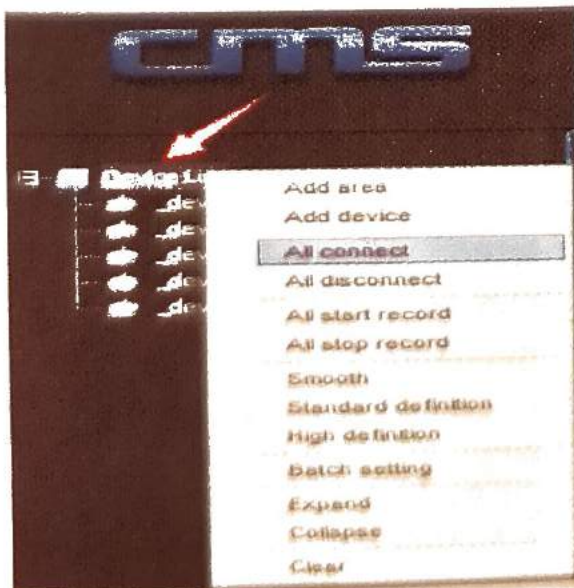

After successful login, the software will automatically search devices in LAN. A dialog box will pop-up if any device is found, click "Add all", devices will be added into the list.

Manually adding: Click the "+" on the left interface, select the "Manual add device", input device name, ID and password and click OK to complete adding.

### 4. Monitoring:

Open CMS software, right-click on Device List and select "all connect" option in the menu; or select an added device in Device List and right-click and select "Start monitoring" in pop-up menu.

## 5. Frequently asked questions

① "Device is offline" is promoted in the device list

A: Please check if the camera properly connected to the network,  
check whether the indicator light is always on.  
Please check if router normal.

② What should you do when the APP of mobile phone cannot receive the push notification.

A: Check whether alarm and alarm push notification are turned on in

the alarm setting and confirm to set "Defense" .

Meanwhile check

the Android phone background progress whether it's forbidden by system or anti-virus software.

③ How to do with motion detection false alarm.

A: Update firmware version ( above 14.0.0.76)  
and APP ( above  
00.46.00.13), adjust the sensitivity in the setting  
of the device; Also can  
adjust through configuration file by changing:  
md\_level = 3 (1~6, smaller numbers more sensitive).

④ Failed to search video file when playing video.

A: Please check if SD card damaged; please check  
the search time of  
the video file, and check the system time of the  
camera.

⑤ The camera cannot connect to WiFi.

A: Please check whether the password of WIFI is  
correct.

Ensure the WiFi is 2.4G cause the device does

not support 5G network.

The router does not limit WiFi access such as AP  
isolation,  
anti-freeloading and so on.

Some phones need to provide targeting rights  
and turn on targeting to  
get a list of WiFi.

⑥ Cannot find the AP device in the WiFi list of  
the mobile phone.

A: The firmware version does not support.  
Mobile phone and device are too far away.
